How To Use

Follow the step-by-step guide below or watch our video at smoothscar.com.

1. Ensure skin is cleansed and dry.
2. Tear open the seal bag and retrieve the case containing BioRNA Antiscar.
3. Carefully open the case by lifting the bottom flap.
4. Gently lift BioRNA Antiscar up with a thumb from either corner. Avoid touching the Micro-Tips in the centre.
5. With one hand holding on to a corner, slowly peel off BioRNA Antiscar from the bottom white layer.
6. Apply BioRNA Antiscar on skin and apply constant pressure for 30 seconds.

Recommended to use a new patch daily for 8 hours overnight for 6 to 8 weeks or based on doctor's recommendation.

SMOOTH SCAR

BioRNA Antiscar

Daily scar care

- Reduces the appearance of scars.
- Patch with Dissolvable Micro-Tips.
- Daily use — one patch, overnight for 8 hours.

Developed based on research studies at Nanyang Technological University & National Skin Centre, Singapore

Our Product

What Is BioRNA Antiscar?

BioRNA Antiscar is a dermatologically and clinically tested dissolvable Micro-Tips patch developed using a proprietary technology. It aims to promote active scar care.

What Is Active Scar Care?

Targets root cause of scarring

Delivered beneath the skin, not onto the surface

How Does It Work?

RNA Nanoplex Active Ingredient

- First in class globally to target root cause of scarring
- Proprietary technology protects RNA
- Tested to ISO 10993 standard
- Dermatologically tested

Dissolvable Micro-Tips

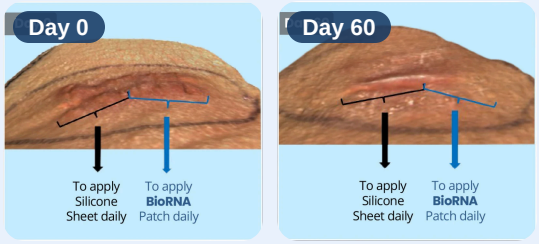
- Micro-Tips dissolve into skin and release our proprietary RNA Nanoplex active ingredient
- Painless delivery
- Enhanced results

Micro-Tip: Nanoplex carried in hyaluronic acid

Proven Effectiveness

Reduces appearance of scars

Comparison of post-surgical chest scars on 3D scanner before & after therapies:



One scar, two treatments: one half used a silicone gel sheet, the other the RNA-based patch.

Results show

95%

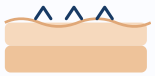
up to 95% scar volume reduction after 60 days*

Highest reported result, not the average. Individual results vary.

8/10 **heal better than silicone gel sheets***

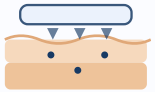
*Study is based on change in scar volume of 50 individuals measured by a high-resolution 3D scanner. Results vary person-to-person.

The Healing Process



Scar formation. During the healing process, injured cells tend to overproduce collagen which causes scarring.

Micro-Tips engage. BioRNA Antiscar's dissolvable Micro-Tips penetrate painlessly into the top layer of the skin upon application.



RNA released. Hyaluronic acid Micro-Tips dissolve in the skin, delivering the RNA Nanoplex to cells to reduce formation of scar tissues.

Patient Benefits

Dermatologically & clinically tested

Painless & Non-invasive

Time-saving

Potential Cost Savings
