How To Use

Follow the step-by-step guide below or watch our video at smoothscar.com.

1. Ensure skin is cleansed and dry. Tear open the seal bag and retrieve the first patch from its casing.
2. Trim off the shorter edge of the adhesive on one side using a clean pair of scissors.
3. Remove adhesive lining.
4. Apply patch on affected skin, with Micro-Tips facing down. Avoid touching the Micro-Tips in the centre.
5. Remove adhesive lining of the second patch.
6. Overlap with the first patch on its cut edge, ensuring that the Micro-Tips are side-by-side.
7. Press gently on the patches for 30 seconds.

*Spread out usage with patch application twice a week (e.g. Monday and Friday).

*Recommended duration of use of 6 to 8 weeks or longer if necessary (may consult your physician).

*Use a new patch for every application. Each patch is for single use only.

SMOOTH SCAR

BioRNA-C

Designed for Caesarean Section Scars

- Reduces the appearance of post-surgical C-section scars.
- Patch with Dissolvable Micro-Tips.
- Hydrates, protects, and supports skin recovery after childbirth.

Developed based on research studies at Nanyang Technological University & National Skin Centre, Singapore

Our Product

What Is BioRNA-C?

BioRNA-C is a dissolvable Micro-Tip patch designed for Caesarean section scars. It contains enhanced formulation from our flagship product, BioRNA Antiscar, which is dermatologically and clinically validated. It aims to promote active scar care.

What Is Active Scar Care for post-C-section scars?

Targets root cause of scarring

Designed to work within scar tissue for better results

How Does It Work?

RNA-based Formulation

- First in class globally to target root cause of scarring
- Proprietary technology protects RNA
- Tested to ISO 10993 standard
- Dermatologically validated
- Optimized for sensitive post-surgical skin, providing both hydration and targeted scar care

Dissolvable Micro-Tips

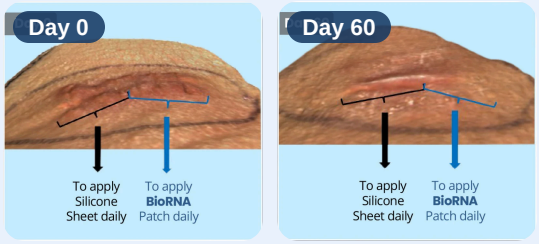
- Micro-Tips dissolve upon engagement with skin and release our proprietary RNA-based formulation
- Painless delivery
- Enhanced results

Micro-Tip: Nanoplex carried in hyaluronic acid

Proven Effectiveness

Reduces appearance of C-section scars

Comparison of post-surgical chest scars on 3D scanner before & after therapies:



One scar, two treatments: one half used a silicone gel sheet, the other the RNA-based patch.

Results show

95%

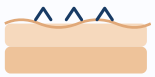
up to 95% scar volume reduction after 60 days*

Highest reported result, not the average. Individual results vary.

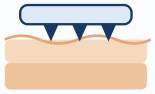
8/10 **heal better than silicone gel sheets***

*Study is based on change in scar volume of 50 individuals measured by a high-resolution 3D scanner. Results vary person-to-person.

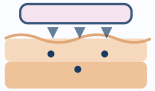
Post-Surgical Healing Process



Scar formation. During the healing process, injured cells tend to overproduce collagen which causes scarring.



Micro-Tips engage. BioRNA-C dissolvable Micro-Tips engage with the top layer of the skin upon application.



RNA released. Hyaluronic acid Micro-Tips dissolve, releasing the RNA-based formulation, calming scar formation, reducing scar appearance.

Patient Benefits

Dermatologically & clinically validated

Painless, non-invasive & steroid free

Time-saving

Potential cost savings
